

## Fossil/Nuclear

Hydrothane Trash Racks are ideally suited for intakes at Fossil and Nuclear Power plants. Hydrothane has equipped many Fossil plants across the USA including:

- Warrick Generating Station, South Carolina Electric & Gas Co.
- Wyman Station, Central Maine Power
- Vero Beach Municipal Station, Vero Beach City, FL
- Crystal River Generating Complex, Florida Power Corp.
- Bailly Station, Northern Indiana Public Service Corp.

The lightweight feature of Hydrothane make

installation much easier while the corrosion resistance means lower costs to maintain and periodically apply protective coatings to the racks. In salt water environments or where zebra mussels and barnacle growth is a problem, Hydrothane will significantly reduce attachment by these organisms. One Florida Utility reported that after installing Hydrothane they had no significant marine growth on their trashracks. Before hydrothane they would send divers down twice each year to inspect and clean the racks.

Hydrothane racks have been installed in fossil plants across the USA.
